

PyCon Nigeria 2017

# Using Python for GIS and Remote Sensing Operations

Slides and Notebook: <https://github.com/forum2k9/pycon-ng-2017>

About me:

Umar Yusuf

Academic Staff at FPN and Freelance GIS Programmer

@shintaku

<https://github.com/forum2k9>

# Contents

## 1) Overview of GIS and RS

- Working with maps and data (location and attribute)
- Areas of application
- Dataset - Vector and Raster
- Traditional tool - ArcGIS and QGIS

## 2) Python for GIS and RS

- If it exists, there is python module for it
- Geospatial python modules
  - For vector data: Shapely, Fiona, PyShp
  - For raster data: OpenCV, Rasterio, Scikit-image, GDAL
  - Others: Geopy, PySAL, PostGIS, SimpleKML (more on pypi)

### 3) Jupyter Notebook - demo

- Geocoding some addresses (GeoPy)
- Visualization on web map (Folium)
- Working with Points, Lines and Polygons
- Image Processing

# Overview of GIS and RS

# Anyone from one of these Geo data science fields?

- ~ Geography
- ~ Geophysics
- ~ Geodesy/Geomatics
- ~ Land Surveying
- ~ Land Navigation
- ~ Geo-IT
- ~ Cartography
- ~ Photogrammetry
- ~ LiDAR
- ~ Remote Sensing
- ~ GIS/Mapping
- ~ Electronic Charting /GIS
- ~ Seismic & Hydrocarbon Exploration
- ~ Mining
- ~ Sensor Technology
- ~ XYZ Positioning & Specialist Navigation
- ~ Environmental Research

# Most likely you have interacted with GIS/RS tools

## Conference Venue

Lagos Chambers of Commerce and Industry Conference

### Get Directions:

Enter Destination From input field below to get directions to our event location

### Venue

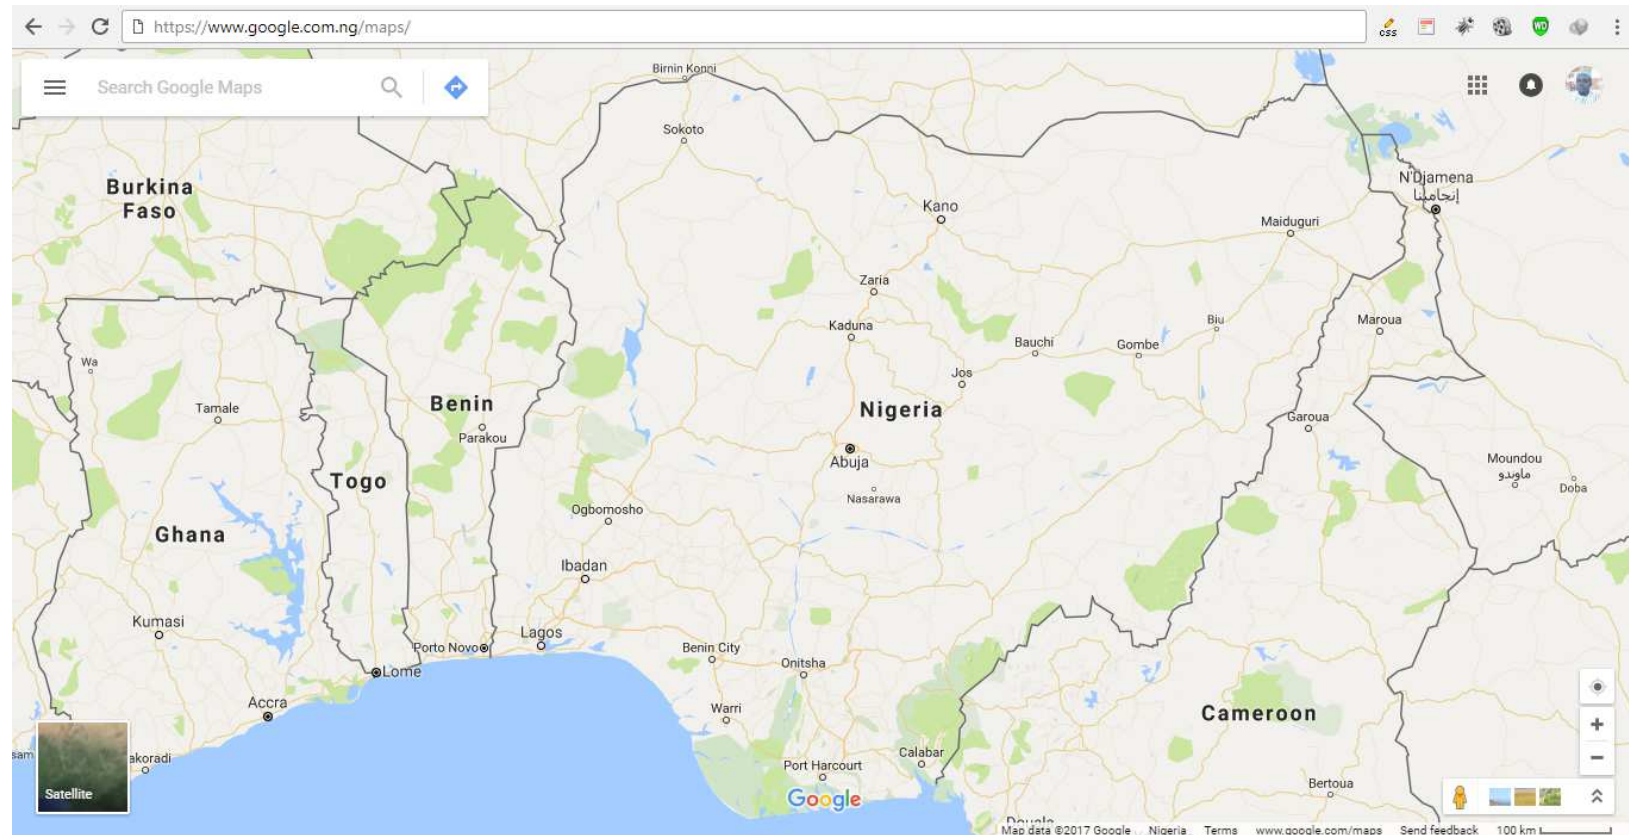

The Conference will hold at the Ground Floor, Lagos Chamber of Commerce and Industry Conference Center, Alausa, Ikeja  
Phone: **+234**

### Transport

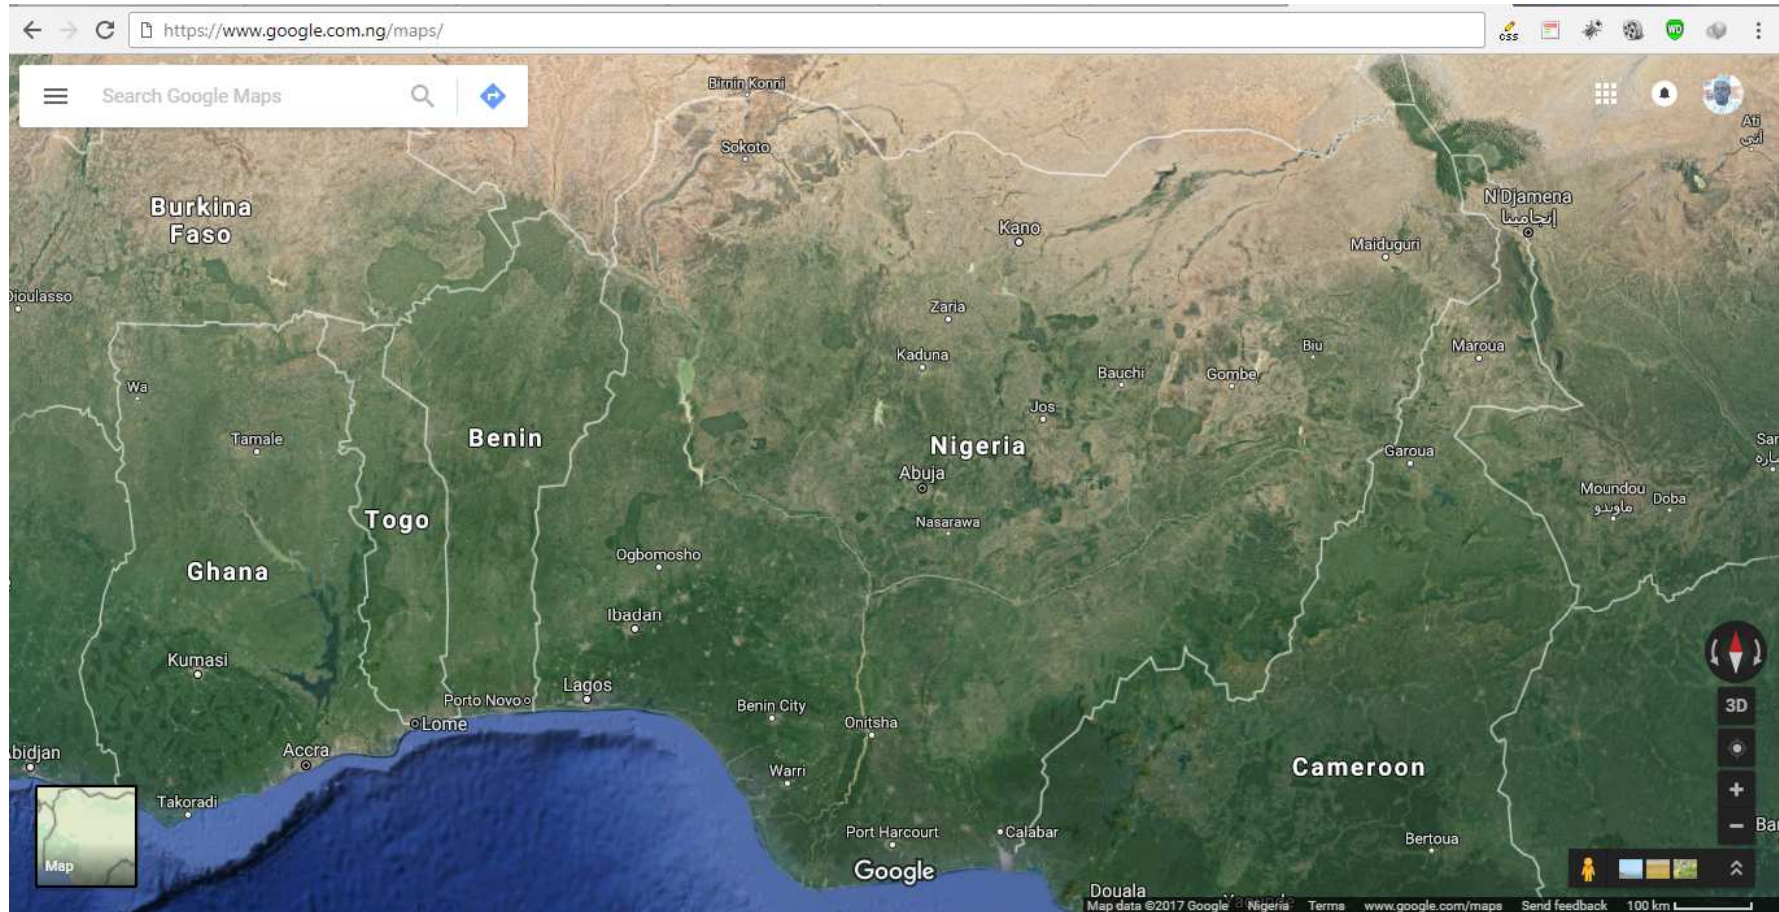

If you are **Driving** the Conference center is well mapped. Use the Google Maps Navigation.

**Public Transportation:** The most straightforward way to get to the venue is take a bus from your originating location going to Ikeja. Make sure to confirm with the driver/conductor they would be taking the route leading to Secretariat. Come off at Barracks BusStop. Where you have the main traffic lights at the intersection. Walk backwards on the Alausa road that is parallel to the Lagos-Ibadan Expressway and the building would be on the right. **The best way is to make use of google Maps from the BusStop to the venue. The venue is a 10 minutes walk from Barracks busstop**

# Working with maps and data (location and attribute)

Maps/satellite imagery + attribute data = GIS/RS

# Areas of application

## **1000 GIS Applications & Uses**

<http://gisgeography.com/gis-applications-uses>

# Dataset - Vector and Raster

**Vector**

**Raster**

**Vector data:** consists of individual points, Lines and polygons

**Raster data:** is made up of pixels (or cells)

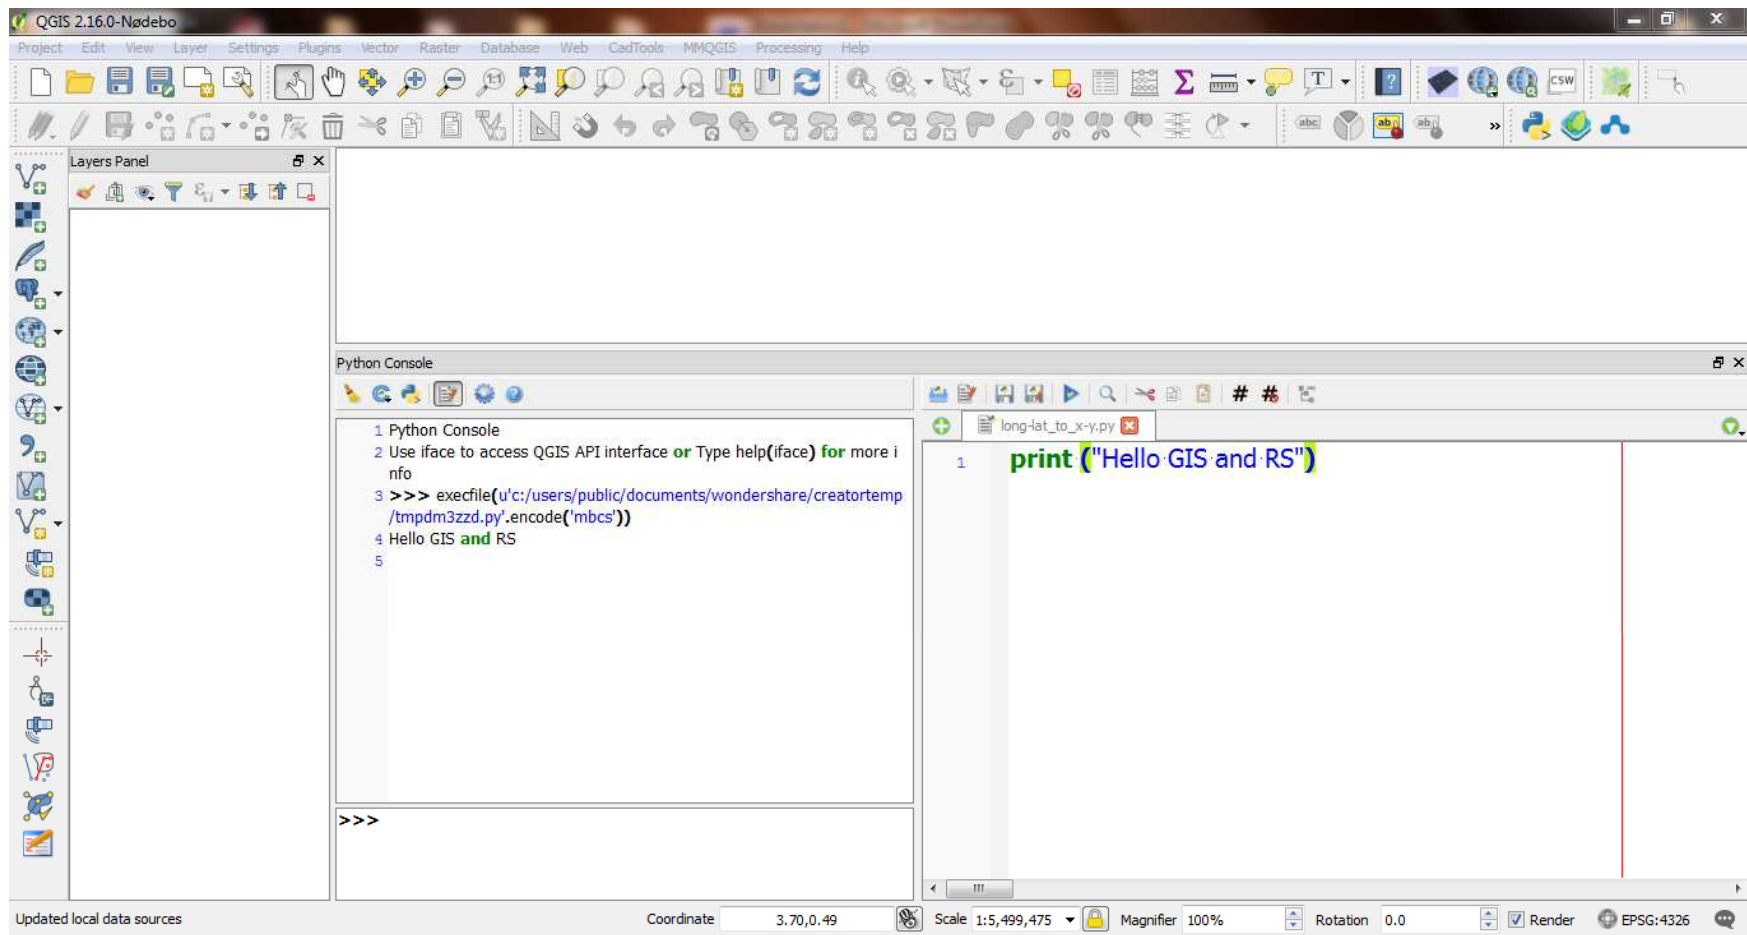

# Traditional tool - ArcGIS and QGIS

**Open source:** QGIS, GRASS, SAGA, gVSIg etc

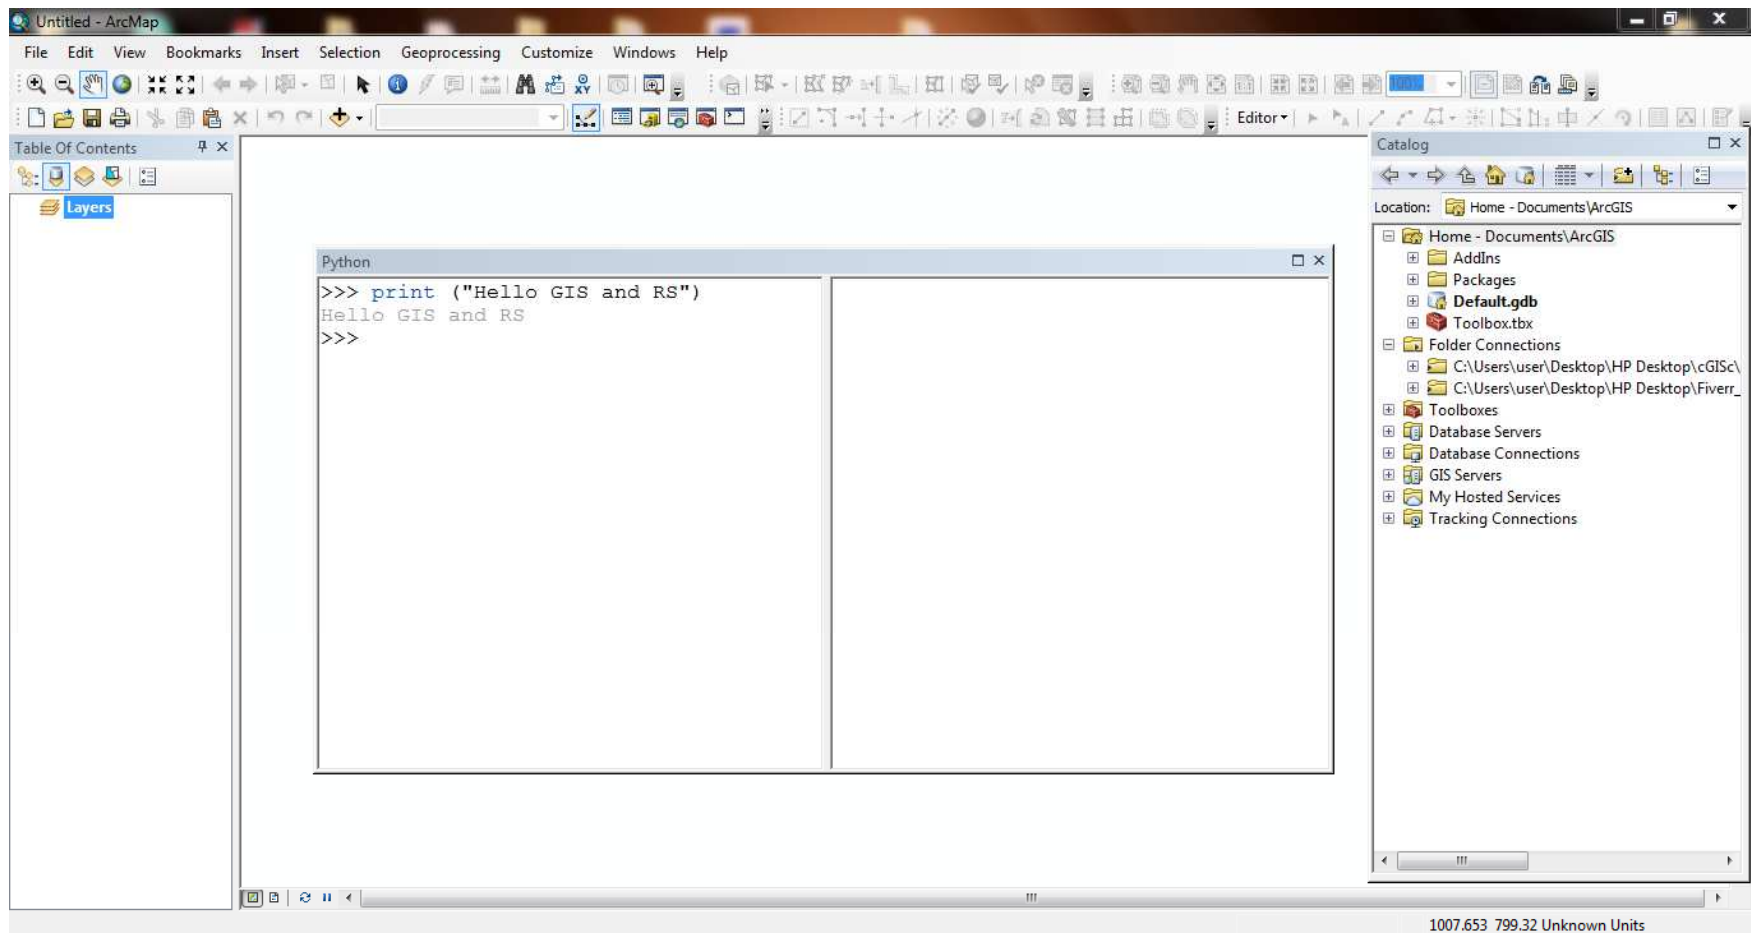

**Commercial:** ArcGIS, Manifold, Geomedia, GlobalMapper etc

\* The top tool in each category supports **Python** as its scripting language

## The QGIS Python Console (Uses PyQGIS module)

**The ArcGIS Python Console (Uses ArcPy module)**

# Python for GIS and RS

# If it exists, there is python module for it

GIS/RS operations with Python can be conducted using:-

- 1) GIS Tools – ArcPy and PyQGIS

- 2) Native Python Tools

# Geospatial python modules

**For vector data:** Shapely, Fiona, PyShp

**For raster data:** OpenCV, Rasterio, Scikit-image, GDAL

**Others:** Geopy, PySAL, PostGIS, SimpleKML ([more on PyPI](#))

# Jupyter Notebook - DEMO

## The story: Places of Tourist Attractions in Lagos

- Working with Coordinates – Geocoding (Pyproj and GeoPy)
- Web-based Geo data visualization (Folium)
- Working with vector and raster (PyShp and OpenCV)
